Equipment for the offshore renewable energy, oceanographic research vessel is open to manufacturing or subcontracting agreements.

Romanian company operates in the following areas: automotive industry, power industry, petrochemical industry, marine industry, heavy steel constructions and bridge cranes. In order to consolidate its presence on international level, the company is looking for a partner interested in a subcontracting or manufacturing agreement.

NEWS

Boosting the EU's Green Recovery: EU invests over €2 billion in 140 key transport projects to jump-start the economy

The EU is supporting the economic recovery in all Member States by injecting almost €2.2 billion into 140 key transport projects. These projects will help build missing transport links across the continent, support sustainable transport and create jobs. The projects will receive funding through the Connecting Europe Facility (CEF), the EU's grant scheme supporting transport infrastructure.

With this budget, the EU will deliver on its climate objectives set out in the European Green Deal. A very strong emphasis is on projects reinforcing railways, including cross-border links and connections to ports and airports. Inland waterway transport is boosted through more capacity and better multimodal connections to the road and rail networks. In the maritime sector, priority is given to shortsea-shipping projects based on alternative fuels and the installation of on-shore power supply for ports to cut emissions from docked ships.

Ukrainian manufacturer of biodegradable oil absorbing sorbent is looking for distributors

The Ukrainian manufacturer of biodegradable oil absorbing sorbent is aiming at expanding the distribution of its products abroad and looking for a partner under distribution services agreement. The products of this company may be of interest to enterprises of all forms of ownership, which carry out the production, processing, storage, transportation and use of petroleum products and lubricants.

NEWS

More protection for our seas and oceans is needed, report finds

The Commission adopted today a report on the Marine Strategy Framework Directive (MSFD) which reveals that, while the EU's framework for marine environmental protection is one of the most comprehensive and ambitious worldwide, persistent challenges remain, such as excess nutrients, underwater noise, plastic litter, and other types of pollution as well as unsustainable fishing. This message is further reinforced in the European Environment Agency's "Marine Messages II" also published today.

Virginijus Sinkevicius, Commissioner in charge of the Environment, Fisheries and Oceans, said "This report and the accompanying EEA Marine Messages confirm that we need to step up action to protect our seas and oceans. We have made progress, for example in the field of sustainable fisheries, but we need additional efforts and stop the irresponsible pollution of our seas. I note with regret that EU Member States will not achieve the Good Environmental Status they were legally required to achieve across all their marine waters by 2020 and that, for some marine regions, efforts required are substantial. The Commission will launch a review of the Marine Strategy Framework Directive, to see what has worked and what has not, and act upon the shortcomings identified. Protecting our seas and oceans is an integral part of the European Green Deal, and it is the precondition for our fishermen and fisherwomen to provide us with healthy and sustainable seafood also in the future and therefore deserves our continued attention across policy areas".
